

Apple Mac OS X Server

Apple Remote Desktop

Cheat sheet for managing Apple Remote Desktop:

Restarting the Apple Remote Desktop Agent, if it for some reason doesn't work

```
sudo  
/System/Library/CoreServices/RemoteManagement/ARDAgent.app/Contents/Resources/kickstart  
-restart -agent
```

Configure the Apple Remote Desktop Agent to allow control/observe - when the fresh install doesn't want to let you in. Note: you probably need to change the user hlk into something else.

```
sudo  
/System/Library/CoreServices/RemoteManagement/ARDAgent.app/Contents/Resources/kickstart  
-activate -configure -access -on -users hlk -privs -all -restart -agent  
-menu
```

These hints are from the [Apple Remote Desktop: Configuring remotely via command line \(kickstart\)](#).
