

# Soekris projects

I am a big fan of Soekris systems from [Soekris Engineering](#).

They are small and easy to work with and seems to be designed with care.

I have done multiple projects with Soekris model 4501 and model 4801

- Soekris [casemod](#) Søren
- Soekris [console server](#) using conserver software and a low profile SIIG PCI-4S

# Buying Soekris systems

I can recommend the following places to buy Soekris systems in Europe - random order:

- [KD85.com](#) - Wim Vandeputte is a nice guy and sells Soekris, wireless hardware and OpenBSD
- [Cortex systems](#) - easy ordering and quick delivery

# Which model?

It will of course depend on what you want to use the Soekris for, but this configuration is very nice:

- Model 4801 with hard disc kit
- Laptop harddrive

but you can of course expand the possibilities by getting the 7-port firewall configuration in special cases!
