

Projects done by Henrik

Welcome to the home of several projects and references to other projects.

The purpose of this page is to collect the small projects I do and document them for others to use.

Current projects in random order:

- Soekris projects
- OpenBGPD project - building a small OpenBGPD setup to learn

Bigger projects with their own home:

- [Security6.net](#) - my company
- [Inet6.dk](#) - home of my thesis and very few pages about IPv6
- VikingScan - my open source multi-user distributed scanner project, planning stages!
